A junior frontend developer looking for his first job in the industry. In my past life, I was a data journalist who became interested in coding and gradually pivoted from words to Python, realizing I was more fascinated by technology than by storytelling. After my previous job ended, I took a few months off to begin my ongoing journey into web development, starting with the frontend and building a bunch of personal projects in React and Next.js, alongside developing my portfolio. My inquisitive mind and journalistic curiosity continue to drive me: they not only fueled my transition into web development but also inspired me to explore beyond the frontend, leading me to experiment with C and PHP.

PROFESSIONAL EXPERIENCE

Data Journalist, ACAPS

10/2022 - 06/2023

Developed engaging data visualizations for thematic reports, highlighting key issues and insights to support the NGO's advocacy and policy work. Leveraged tools like Flourish to create interactive and static visualizations, making complex data accessible and understandable to diverse audiences.

- [ACAPS Seasonal Calendar](#)
- [Cabo Delgado: Health Facilities Under Siege](#)
- [ACAPS Humanitarian Access Index](#)

Data Journalist, Dalk

10/2022 - 06/2023

Pitched and produced data-driven media for an extensive and diversified number of clients, including banks, energy and pharmaceutical companies. Collaborated with designers and web developers to implement design changes and ensure visual consistency throughout various products.

- [Più alberi per salvare il clima delle città](#)

Web Developer, Green Consulting

10/2016 - 04/2017

Customized WordPress themes and templates using HTML and CSS to meet design requirements and improve site aesthetics. Conducted thorough testing and debugging to identify and fix visual and functional bugs across multiple browsers and devices.

PERSONAL PROJECTS

Remembrify

Remembrify is a SPA made in React to maintain healthy routines while working.

EcoWatcher

EcoWatcher is a mobile app made in React Native to report litter in your city by simply snapping a photo.

CityEars

CityEars is a curated list of musical gigs in Italian cities built with Next.js.

More projects are available on [my portfolio](#).

SKILLS

SASS

Javascript

PHP
